

WILDFIRE FUEL MAPPER

Fire in Sonoma County

In Sonoma County and across the west, fires have grown larger and more destructive. Our communities need a coordinated, regional approach to manage fuels and protect people, ecosystems, and infrastructure. While fuel reduction projects require maps and information about a landscape, there are few tools to assist Sonoma County landowners and managers in locating and understanding fire hazards on their land.

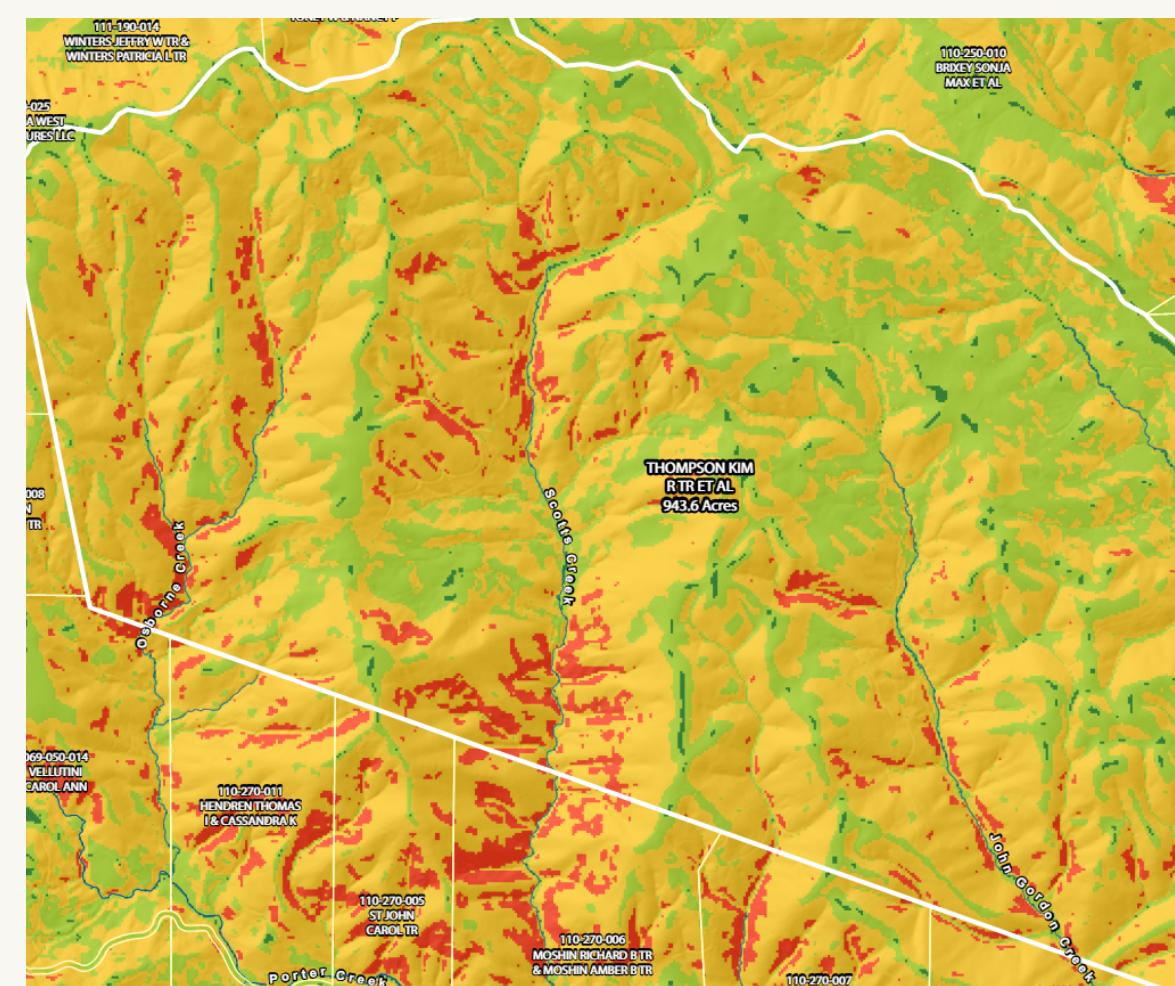

An Approach to Addressing Fire Hazard

The Wildfire Fuel Mapper addresses this gap, providing Sonoma County landowners with properties greater than 3 acres with the information they need to understand and reduce fuels on their land.

A Tool for Evaluating Fuels

The Wildfire Fuel Mapper generates 10 maps, downloadable as a report, that evaluate unique landscape and topographic elements specific to a selected property parcel or watershed. These maps summarize this information to help landowners understand fuels and fire hazard. Elements include:

A Tool for Reducing Fuels

In addition to providing detailed information about fuels and fire hazards on a landscape, **The Wildfire Fuel Mapper** provides several other tools and resources. These tools and resources are designed to help landowners understand how to use their maps and start taking action. These tools and resources connect users with:
